

Michael Boonstra – Environmental Explorations
July 6th through September 1st

This exhibit consists of site-specific installations accompanied by drawings and ceramic works created over the last two years. The installations use light as their primary medium and are ephemeral in nature- changing as the atmospheric conditions outside of the gallery change. The drawings and ceramic work are created in concert with environmental conditions such as rain and evaporation or in response to the semi-natural materials used to construct/create the pieces.
